

# Notched Guttering

A true product innovation

## The revolutionary new Polypipe Notched Gutter is a true innovation within rainwater systems.

Included in our new Elegance Ogee profile system, Notched Gutter provides a secure fit and counteracts the problem of gutters becoming dislodged from their retaining clips during warm weather due to heat expansion.

With the new Polypipe Notched Gutter, dislodgement due to heat expansion and the resulting leaky joints, is a thing of the past. The leading edge of the gutter is notched and the system uses a flexible band clip to secure the gutter. The lugs on the gutter are simply matched to the band clip and snapped into place. (See diagram 1)

An added benefit of the Notched Gutter system is the inclusion of grooves between the notches, which act as cutting markers. Wherever possible notched gutters should be cut at the mid-point of the notch as indicated by the mark. (See diagram 2)

### Product benefits:

- Notches engage in band clip for a more secure joint
- No more dislodged guttering due to heat expansion
- Lightweight construction for easy handling, assembly and installation
