

Swish launches decorative Tudor Boards

Swish Tudor Boards can be used to create a traditional effect on suitably rendered internal or external walls, offering a low maintenance solution with a stylish finish.

Designed to achieve a Tudor styling, these decorative boards can be used at gable ends or along the side of a house to create a decorative feature.

Swish Tudor Boards are available as 20mm thick cellular PVC profiles, 150mm wide, in standard 5 metre lengths (product code no. C540)

Profiles are available in four foiled finishes including **Mahogany, Light Oak, Rosewood** and **Black**. The foil wraps around both edges of the board, providing a fully finished look whilst maintaining the same low maintenance benefits of other Swish profiles.

Installation Guidelines

Fix at maximum 400mm centres and 200mm from any cut ends. To achieve a positive fix through the 20mm thick board, Swish recommend 2 x 65mm screw fixings which should be suitable for the substrate i.e. plug and screw for masonry/block work and wood screws if into timber batten or support. Joints between profiles should be achieved either by butt joint and silicone sealant (either clear or of a close colour match) or with the use of PVC trims.
