

125mm Gutter Joint Element

A = 140mm B = 16mm

125mm Gutter Joint Element

- Provides increased resistance for gutter to gutter and gutter to corner joint connections
- manufactured from 0.55mm thick zinc coated steel
- Only available in plain galvanised mill finish (element not seen as concealed within joint)
- Unique design to Roofart but is compatible with other well know systems (please ask for more info)
- Note that this is not an essential item to use on joints but does add strength and is particularly advised on corner joints where the corner element can't be supported by a bracket (often the case when using rafter brackets)

- Provides high resistance connections between gutter-gutter and gutter-corner
- Manufactured from zinc coated steel 0.55mm
