

# GUTTERBRUSH CLIP®

## Application

Please refer to the the information and diagrams on when and how to fit the Clip.

**PLEASE NOTE THAT THE HEDGEHOG GUTTERBRUSH IS DESIGNED TO FIT INTO MOST GUTTER PROFILES WITHOUT REQUIRING ANY FIXING.**

The protruding nose of the roof tile/material is enough to secure the brush in its place even in high winds. However, in situations where the guttering is low hung and the tile/material nose does not reach the gutter, it is recommended that a fixing is used, such as the **Hedgehog Gutter Clip** (see diagram below) or a suitable cable tie.

We also strongly recommend that a fixing be used on flat or corrugated roofs (see diagram below) that do not have any other method or form of securing the brush into place.

Set at intervals of 2 metres. (More if required in high wind areas).

Gutterclip Profile

NOTE: The above scenario is ideal and does not require a fixing.

NOTE: The above would require a fixing clip.

NOTE: The above would require a fixing clip.

NOTE: The above would require a fixing clip.
